

WHITE PAPPER:

GLOBAL CARE TOKEN:

The Global Care Token was created to care people and the future.

It is defined as the NGOs token, since it aims to be a network that groups together NGOs and NGDOs. A network that brings together organizations from various fields, national, international and local; giving our support to their activities and actions.

We take care of the most disadvantaged people, through actions selected by our owners.

We take care of our people (holders), through static rewards.

We take care of the future, through ecological actions, reducing the CO2 footprint, among others.

The Global Care Token (GLCare) supports the development and functioning of the people mission through transactional fees coded in its smart contract.

Currently, the contract employs: Static Rewards, Charity, Liquidity Pool Provisioning and Marketind/Development. The total current transactional tax is 12%, as broken down in the following sections.

We will plant 1 tree for each holder. Every 500 holders obtained we will plant 500 trees.

Global Care encourages holding by reducing the total supply of tokens over time, while creating increased demand for the utility token through the development of a highly functional and incentivizing donations, and the formation of partnerships to facilitate greater distribution.

Contract:

0xC580c769dA3Ffb9e7689d2696F1AD3c97A24047e

Static Rewards:

Holders of GLCare currently earn additional utility tokens. Every movement of tokens from one wallet to another, five (5%) percent of the transactional amount is taxed and distributed to every holder. These rewards earned are directly deposited in the holders' wallets, without any setup or additional process involved. Higher transaction volume increases static rewards for holders and charity.

Governance:

5% of each token transaction is allocated to a separate fund and regularly distributed among the assigned entities. The holders will be able to vote in the future the distribution of donations to a varied selection of charities agreed upon by the community. The community ensures that the charities voted on are transparent and effective in their cause.

Token Burn:

The portion of each buy and sell transaction that is allocated to charity from charities to fund their initiatives. To compensate for this selling pressure, for every 500 holders the 5% of tokens will be burned, so progressively up to 50% of the total. This deflationary process incentivizes holding by directly reducing supply and increasing value per token, all variables held equal.

Liquidity Pool Provisioning:

To reduce excessive volatility, a 1% fee is automatically added to the liquidity pool.

Automatic liquidity provisioning is a built-in feature that creates a cushion, or floor price, to manage volatility and price drops. Similar to the static rewards and charity function, token contract automatically removes a percentage from each buy and sell transaction to inflate the liquidity pool (LP), thereby creating stability and reducing arbitrage opportunities.

In summary, Global Care slows token velocity through:

1. Static Rewards.
2. Locking up Dev Team Tokens and Liquidity generated.
3. Token burn after each milestone reached with holders. (5% for every 500 holders).

Security:

We are committed to the transparency and security of the protocol in its development.

Contract developer portfolios available.

Information about the available charity wallet.

Charity receipts available.

Developer tokens are locked for a predetermined time period and will be unlocked according to the time horizon and milestones set in our detailed Road Map. Future agreements made by the team may alter this Road Map.

Proof of Burn available.

Burned tokens will be sent to Burn Address and are irretrievable.

Smart Contract audit. Results available.

Email info@globalcaretoken.org with any questions.

Road Map:

Q1 – 2022:

Idea created by Founding members.

Create Governance-Enabled Token.

Global Care Branding & Logo design.

Website development.

Expansion & Integration of Social Media.

Token Listed on PancakeSwap, Trust Wallet.

Implantation of the whale control system.

Passed Audit.

Charity Donations.

Q2 – 2022:

Partnerships & Fundraisers to Build Community Awareness.

CoinGecko Listings.

CoinMarketCap Listings.

Social Campaign Launch.

Charity Donations.

Q3 – 2022:

Enhanced Press Release & Marketing Campaign.

Large Charity Partnerships.

Live Fundraising Events.

Initiation of Social Actions.

Charity Donations.

Q4- 2022:

Exchange Listings & Increased Liquidity.

Charity Launchpad Feasibility Evaluation.

Development of New Campaigns and Charity Actions.
